22/5/2024

Program Specific Outcomes (PSOs)

PSO1 Developing Computational Systems: Use principles of various programming languages, data structures, database management systems, computer algorithms, theory of computation, networking and software engineering for designing and implementing computational systems.

PSO2 Designing Intelligent Machine Learning Systems: Utilize the principles and tools of artificial intelligence, soft computing, data mining and machine learning, data analytics, robotics, IoT, augmented reality etc. for designing and working with intelligent systems that learn from their environment.

| Course Code | Definition/ Category |
|-------------|--|
| HSMC | Humanities, Social Sciences and Management Courses |
| BSC | Basic Science Courses |
| ESC | Engineering Science Courses |
| PC | Program Core Courses (Branch specific) |
| PE | Professional Elective Courses (Branch specific) |
| OE | Open Elective Courses (from Humanities, Technical Emerging or other Subjects) |
| EEC | Employability Enhancement Courses (Project work/ Summer Training/ Industrial Training/ Practical Training/ Internship/Seminar, etc.) |
| AU | Audit Courses [Environmental Sciences, Indian Constitution] |

V

PC/CSEAIML/11-T: Machine Learning with Python Programming

| Course Type | Course Credit | Contact Hours/Week | Delivery Mode | Maximum Marks | | | Exam Duration | Assessment Methods |
|--------------|---------------|--------------------|---------------|---------------|----------|---|---------------|---------------------------------------|
| | | | | External | Internal | | | |
| Program Core | 03 | 03 | Lecture | 70 | 30 | | 3 Hours | TEE/MTE/ Assignment/ Attendance |
| | | | | | 20 | 5 | | |

Instructions to paper setter for Final-Term Examination: The Final-Term examination shall cover the whole content of the course. The total number of questions shall be nine. Question number one will be compulsory and will be consisting of short/objective-type questions from the complete syllabus. In addition to the compulsory first question, there shall be four units in the question paper each consisting of two questions. The student will attempt one question from each unit in addition to the compulsory question. All questions will carry equal marks.

Course Objectives: The objective of this course is to make the students familiar with the topics of python programming for machine learning, predictive models, supervised learning. Unsupervised learning.

| Course Outcomes | At the end of this course, the student will be able to |
|-----------------|--|
| CO1 | define: the terms of machine learning: types of machine learning, data preprocessing, classification, regression, and neurons. |
| CO2 | explain: learning types, data preprocessing and architecture of ANN. |
| CO3 | apply: training and testing data using data preprocessing and model selection techniques and classification, regression, clustering techniques according to their problem. |
| CO4 | Classify: data preprocessing, model selection, regression, classification, and unsupervised learning techniques. |
| CO5 | compare: Data Preprocessing techniques, Supervised and unsupervised learning. |
| CO6 | Design: predictive model using python programming. |

-6-

| Course Content PC/CSEAIML/11-T: Machine Learning with Python Programming | |
|---|--|
| Unit I | Basic of Python: introduction, data types (tuple, list, sets, dictionary), operators (arithmetic, comparison, logical, bitwise, assignment, membership), conditional statements (if-else, nested if, if-elif-else, ternary), loops (for, while, loops controls), functions (*args,**kwargs, lambda). Object Oriented concepts: class, object, polymorphism, inheritance, abstract, encapsulation. |
| Unit II | Numpy: introduction, array indexing, slicing, join, search, split. Pandas: introduction, series, data-frame, read csv files, correlation. Data Visualization: introduction of matplotlib and seaborn, box plot, histogram, subplot, scatter plot, bar chart, pie chart, qqplot. Data Preprocessing: introduction, types of data in machine learning, data pre-processing (missing values treatment, outlier treatment, dimension reduction and feature subset selection). |
| Unit III | Basics of Machine Learning: introduction, types of machine learning and its comparisons, applications of machine learning. Linear Regression: Introduction, steps in building model, regression models (linear regression, multiple linear regression), linear regression model diagnostics (Co-efficient of Determination), bias-variance trade-off, k-fold cross-validation, regularization, regression assumptions (multi-collinearity, VIF), residuals analysis. |
| Unit IV | Classification Problems: classification overview, feature encoding, classification models (using logistic regression, random forest, support vector machine, decision tree), confusion matrix. Unsupervised Learning: Introduction and its applications, techniques in unsupervised learning (clustering, K-means). |
